2. Core Capabilities

- Software Engineering - modern web applications, APIs, integrations and enterprise platforms.
- Cloud - AWS, Azure and Google Cloud architecture and migration.
- DevOps - CI/CD pipelines, automation and cloud operations.
- Data - data engineering, analytics and pipeline automation.
- AI - AI integration and private enterprise AI solutions.
- Cybersecurity - secure architecture, application security and security consulting.
- Managed IT - infrastructure management, support, monitoring and operational services.
- Digital Transformation - modernisation of legacy platforms and processes.
- UX/UI - accessible user experience and interface design.
- System Integration - connecting platforms, data and third-party systems.

3. Technology Capability

We deliver with modern, mainstream technology. Core platforms and languages include:

- | | |
|--------------------------|--------------|
| - AWS | - PostgreSQL |
| - Azure | - MySQL |
| - Google Cloud | - MongoDB |
| - Microsoft | - DynamoDB |
| - React | - WordPress |
| - Next.js | - Joomla |
| - TypeScript | - Drupal |
| - Node.js | - Kubernetes |
| - Flutter / React Native | - Docker |
| - Python | - Terraform |
| - Go | |

A full technology stack matrix and capability confirmations are available on request for your specific engagement.

4. Procurement Readiness

- Professional Indemnity, Public Liability and Cyber insurance - certificates available on request.
- Privacy program - Privacy Act 1988 (Cth), Australian Privacy Principles and Notifiable Data Breaches scheme.
- Information security practices - access control, secure software development and incident response.
- WHS - work health and safety obligations across all engagements.
- Modern slavery - zero-tolerance policy with supplier due diligence and supply chain vigilance.
- Supplier governance - prime-contractor model with approved, contracted specialist partners.
- Accessibility - WCAG-aligned digital services.
- Data residency - Australian data and sovereign delivery options.

5. Delivery Model

- Australian leadership - named Australian delivery leads on every engagement.
- Specialist delivery teams - senior engineers and designers assembled per scope.
- Subcontractor controls - approved specialists under written agreements, with Axisonic accountable for all subcontracted work.
- Quality assurance - peer review, automated testing and release gates before production.
- Project governance - reporting, acceptance management and SLA monitoring throughout delivery.

6. Case Studies

Representative engagements are shown anonymised. References and verifiable case studies are available on request.

Case 1

- National QSR group - AI voice ordering and intelligent delivery orchestration rebuilt the order pipeline end-to-end, from customer order to courier dispatch.

Case 2

- Multi-channel retailer - event-driven inventory intelligence predicting regional demand and keeping catalogs synchronised across every channel in real time.

Case 3

- Healthcare clinic network - secure intake automation and confidential scheduling portals that reduced manual administration across the clinic network.

7. Differentiators

- Senior technical leadership - architects and leads engaged directly on delivery, not handed off.
- Australian accountability - one prime-contractor entity with a single point of responsibility.
- Flexible delivery models - standard, Australian-data and sovereign delivery options.
- Specialist talent network - approved specialists scaled to scope under Axisonic control.
- Secure engineering - security built into the delivery lifecycle, not bolted on.
- Transparent commercial model - clear pricing, scope and reporting on every engagement.
